

Introduction to principles and practice of Knowledge Translation

Facilitators

Bey-Marrie Schmidt

Health Systems Research Unit, South African Medical Research Council

Learning objectives

By the end of this workshop, participants will:

- Introduce the science and practice of Integrated Knowledge Translation (IKT).
- Provide an understanding of IKT stakeholders, their varying levels of interest in, and influence on, research.
- Introduce stakeholder mapping and analysis as a method for engaging and managing different IKT stakeholders.

Brief description of content

Intended users of research findings (IKT stakeholders) have different levels of interest in and influence over the production and utilisation of research evidence. This workshop will help participants systematically mapping their own IKT stakeholders, analyse their stakeholders' levels of interest and influence on their research projects/findings, and develop strategies for stakeholder engagement.
